FINE AUDIO RACKS

WE WILL **RACK YOU!**

Catalogue 2026

"Quality is never an accident."

John Ruskin

made in Italy

Eccellenza italiana

Italian Excellence

Italian craftsmanship is more than a manufacturing tradition. It is a culture of precision, proportion and attention to every detail, where engineering and aesthetics exist in perfect harmony.

Founded in Bergamo (Lombardy) in 2008, Bassocontinuo manufactures audio racks and accessories embodying the essence of Made in Italy. From its origins as a small artisan workshop, the brand has grown internationally, with its creations appreciated in more than 50 countries worldwide.

At the heart of Bassocontinuo's philosophy lies the belief that the rack is not simply a support, but an integral part of the Hi-Fi system - a refined foundation designed to drastically reduce unwanted vibrations and structural resonances, ensuring faithful sound reproduction.

Maestria artigianale italiana

Italian Craftsmanship

Behind every Bassocontinuo rack lies a meticulous handmade production process, combining skilled craftsmanship with the expertise of specialised local partners.

More than 35 artisans and companies contribute with their know-how in woodworking, machining, painting, carbon fibre processing and leatherwork, creating products where precision and attention to detail define every stage of production.

Cultura del design

Design-Oriented Mindset

Design is an essential part of Bassocontinuo's identity.

Working alongside internationally award-winning architects and designers such as Marco Acerbis, Antonio Lanzillo & Partners and Christoph Nussbaumer, we develop products where aesthetics, functionality and acoustic performance coexist in perfect balance.

Rigore scientifico

Scientific Approach

Performance begins with measurement.

Bassocontinuo collaborates with an independent external laboratory at Politecnico di Milano to scientifically test and validate its products through advanced testing procedures.

Static load tests and dynamic vibration analysis with accelerometers provide objective data, guiding continuous improvements and supporting the development of future audio solutions.

Flessibilità progettuale

Evolving Modularity

Designed to evolve over time, our racks offer complete modular flexibility, allowing the addition of extra shelves, height adjustment and layout reconfiguration according to changing requirements.

An initial investment can grow together with your audio system, offering flexibility, long-term value and a solution designed to accompany your listening journey.

AEROLINE

The first rack collection designed by architect Marco Acerbis, bringing a bold, unconventional vision to the world of High-End audio.

For the first time, design takes centre stage. Sculptural geometry, refined materials and structural carbon-fibre connectors come together to create a technical rack that is as beautiful as it is functional.

A distinctive interpretation of Italian design, where form follows function and technology becomes an integral part of the design.

REVOLUTION X

A new benchmark in audio support, built around the uncompromising properties of **structural carbon fibre** - a technology uniquely brought to High-End audio by Bassocontinuo.

Designed by Austrian designer Christoph Nussbaumer, Revolution X combines Formula 1-derived unibody technology (monocoque) with a completely handmade lamination process, delivering exceptional rigidity, damping, and inertness.

Oltre la fibra: il carbonio strutturale

The Making of Structural Carbon

Unlike cosmetic carbon fibre, used primarily as a surface finish for aesthetic purposes, structural carbon fibre is engineered to perform a true load-bearing function.

At Bassocontinuo, its production is a highly demanding process, combining a precision-engineered aluminium mould, an advanced lamination process and unibody technology (monocoque) - a construction method forming the structure as a single, continuous piece.

Every carbon component is entirely handmade, requiring considerable time, exceptional precision and specialised expertise. It is a process where craftsmanship matters as much as technology: every detail, every layer and every stage of production must be executed with absolute care.

This technology is at the core of the Revolution X racks and Aeroline connectors.

B by Bassocontinuo

Make it yours

Born for those who demand the extraordinary, B by Bassocontinuo is a celebration of exclusivity, craftsmanship and uncompromising attention to detail.

The Reference Line is the starting point - our most versatile collection, offering the broadest canvas for personal expression through an almost limitless choice of materials, finishes, proportions and details.

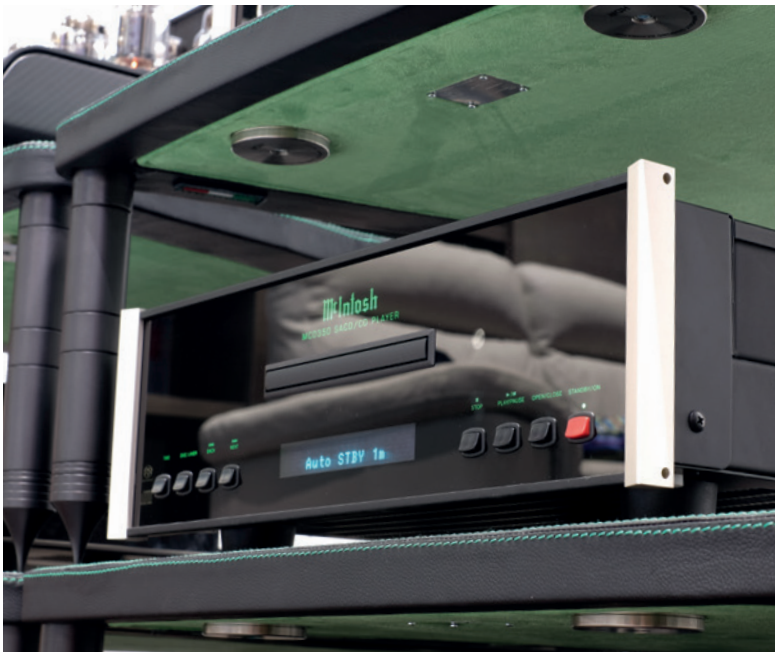

But the bespoke vision extends beyond the Reference Line: every Bassocontinuo rack can be individually interpreted and refined, becoming unmistakably yours.

B by Bassocontinuo

The Bespoke Experience

A world of possibilities, at your fingertips.

With our Rack Configurator, you can configure your Bassocontinuo rack from the comfort of your home.

Select your model and discover a curated selection of materials, finishes and details, conceived by our design team to create distinctive combinations.

Official Collaborations

Some systems call for something beyond the standard.

Bassocontinuo collaborates with leading names in High-End audio to develop bespoke racks tailored to their components, proportions and distinctive design language.

Each partnership combines Bassocontinuo's engineering and craftsmanship with the unique character of the brand and its equipment.

Sonus faber

X

Handmade in Italy Bassocontinuo® FINE AUDIO RACKS

An all-Italian partnership shaped by a shared passion for design, craftsmanship and High-End performance.

Together, Bassocontinuo and Sonus faber created a series of bespoke racks conceived as a natural extension of their iconic loudspeakers.

The collaboration gives rise to exclusive finishes: **Sf Edition Wenge and Walnut** for the Classic Line, and **Sf Edition Glossy Wenge**, **Graphite and Red High Gloss** for B by Bassocontinuo — each featuring inlay panels handcrafted by Sonus faber artisans, using the same fine materials and finishes that define their renowned loudspeakers.

ULTRA FEET

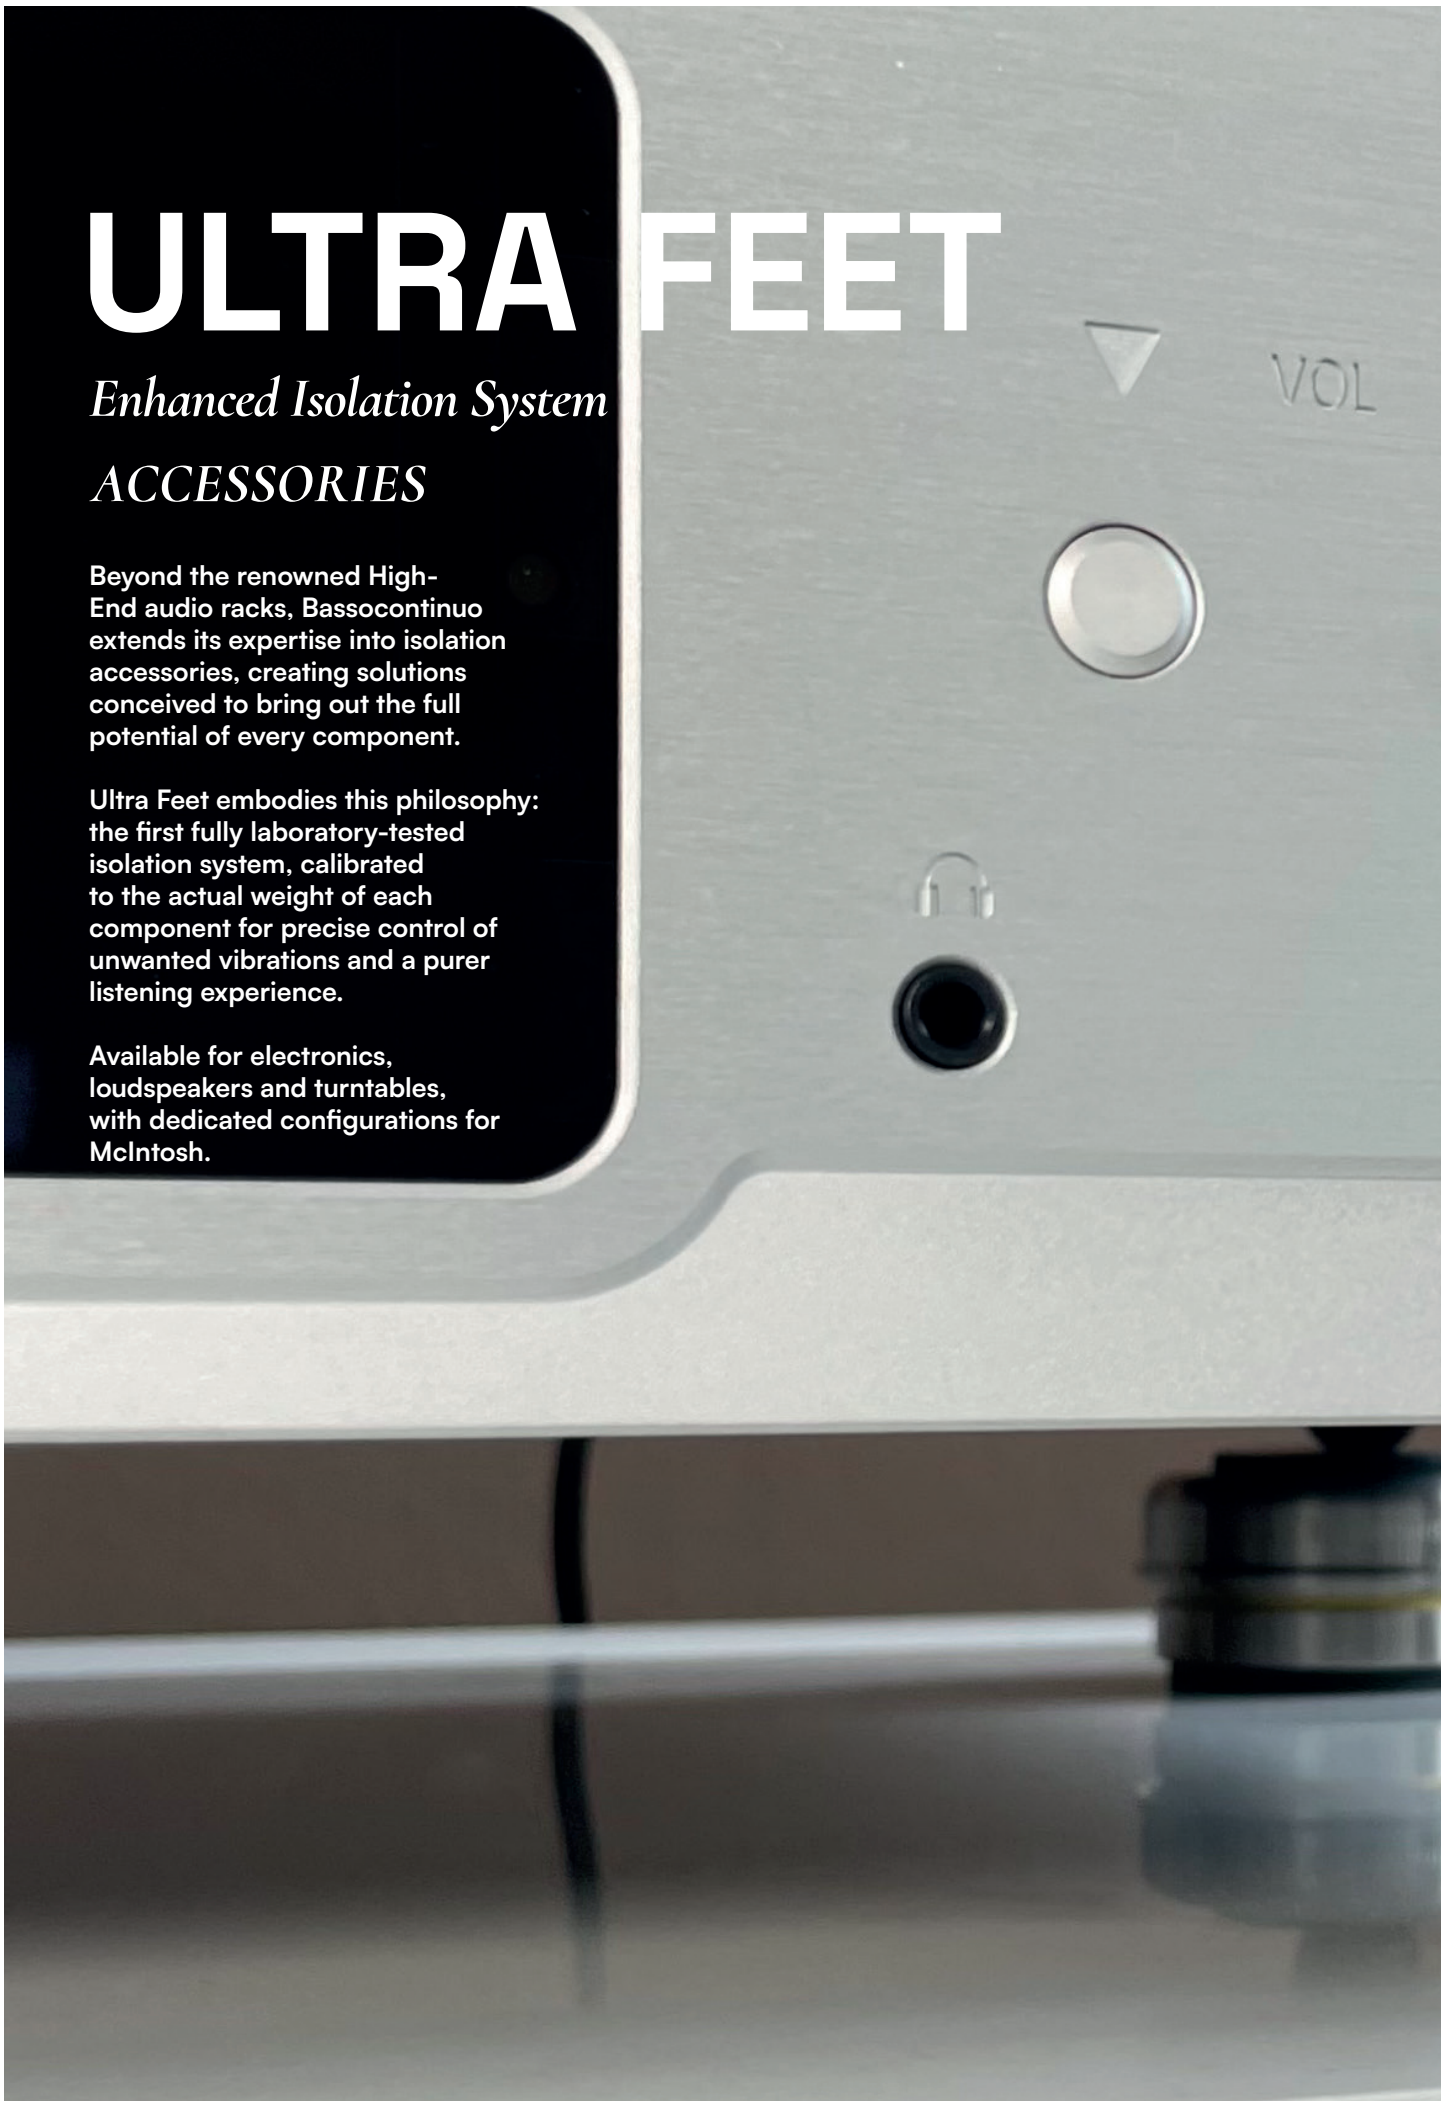

Enhanced Isolation System

ACCESSORIES

Beyond the renowned High-End audio racks, Bassocontinuo extends its expertise into isolation accessories, creating solutions conceived to bring out the full potential of every component.

Ultra Feet embodies this philosophy: the first fully laboratory-tested isolation system, calibrated to the actual weight of each component for precise control of unwanted vibrations and a purer listening experience.

Available for electronics, loudspeakers and turntables, with dedicated configurations for McIntosh.

Analog Accessory

Ultra Feet Level 1-8

Ultra Feet controls unwanted vibrations at their source, dissipating energy as heat and creating a more stable foundation for every component. Placed beneath your components, they seamlessly replace or complement the original feet with effortless precision.

There is no universal solution. Each model is precisely calibrated to a specific load range, with selected visco-elastic damping materials for maximum effectiveness.

Available in 8 different levels, alongside 4 models specifically engineered for McIntosh components - all engineered to reveal greater detail, refined focus and enhanced dynamics.
